

The curry tree (*Murraya koenigii*) is a tropical to sub-tropical tree in the family Rutaceae (the rue family, which includes rue, citrus, and satinwood), which is native to India and Sri Lanka. Its leaves are used in many dishes in India, Sri Lanka, and neighboring countries. Often used in curries, the leaves are generally called by the name 'curry leaf', although they are also literally 'sweet neem leaves' in most Indian languages (as opposed to ordinary neem leaves which are very bitter and in the family Meliaceae, not Rutaceae). Curry leaves have always been sought after for their unique flavor and usefulness in cooking, but there are also a number of health benefits that make them highly appealing.

This book aims to provide a brief and simple description of the background, agronomy aspects and physico-chemical properties of curry leaf. This book will provide readers a comprehensive aspects of pre-processing methods of curry leaf, and the potential of curry leaf as antimicrobial agents. Last but not least, this book also provide readers with a self-contained guide on the application of statistical analysis in curry leaf related research.

Contents

Preface

Acknowledgement

Chapter 1 Background of Curry Leaf

Huck Ywih Ch'ng

- 1.1 Origins
- 1.2 History
- 1.3 Synonym in Indian language
- 1.4 Synonym in other language
- 1.5 Taxonomic status
- 1.6 Growing season
- 1.7 Plant description

Chapter 2 Pre-processing of Curry Leaf Plant

Laila Naher

- 2.1 Introduction
- 2.2 Uses of curry leaves
- 2.3 Pre-processing of curry leaves for cuisine:
- 2.4 Harvesting time of curry leaf
- 2.5 Processing of curry leaf
- 2.6 Conclusion

Chapter 3 Review on Extraction Techniques of *Murraya koenigii*

Norhafizah Md. Zain

- 3.1 Introduction
- 3.2 Extraction and solvents selection
- 3.3 Plant materials
- 3.4 Extraction methods
- 3.5 Conclusion

Chapter 4 Physico-chemical Properties of Curry Leaf

Siti Nuurul Huda Mohammad Azmin

- 4.1 Introduction
- 4.2 Ethnobotanical uses of curry leaf
- 4.3 Research on physicho-chemical properties of curry leaves

Chapter 5

Curry Leaf as Potential Antimicrobial Agents

Khomaizon A.K. Pahirulzaman

5.1 Introduction

5.2 Antimicrobial assay

5.3 Antibacterial assay on curry leaf extract

Chapter 6

Statistical Analysis for Curry Leaf Related Research

Jeng Young Liew and Leony Tham Yew Seng

6.1 Introduction

6.2 Steps in statistical data analysis

6.3 Selecting a test statistic

6.4 Statistical analysis for curry leaves: A review

6.5 Conclusion

FOR AUTHOR USE ONLY

Preface

The curry tree (*Murraya koenigii*) is a tropical to sub-tropical tree in the family Rutaceae (the rue family, which includes rue, citrus, and satinwood), which is native to India and Sri Lanka. Its leaves are used in many dishes in India, Sri Lanka, and neighboring countries. Often used in curries, the leaves are generally called by the name 'curry leaf', although they are also literally 'sweet neem leaves' in most Indian languages (as opposed to ordinary neem leaves which are very bitter and in the family Meliaceae, not Rutaceae). Curry leaves have always been sought after for their unique flavor and usefulness in cooking, but there are also a number of health benefits that make them highly appealing.

This book aims to provide a brief and simple description of the background, agronomy aspects and physico-chemical properties of curry leaf. This book will provide readers a comprehensive aspects of pre-processing methods of curry leaf, and the potential of curry leaf as antimicrobial agents. Last but not least, this book also provide readers with a self-contained guide on the application of statistical analysis in curry leaf related research.

Therefore, this book is designed as a quick reference text, with the aim that researchers, students, academicians with little experience in curry leaf plant are able to grasp their understanding of the scientific aspects of the curry leaf plant. This book will also be of significant interest to those working or doing research in the applied sciences.
