# TEACHING ENGLISH GRAMMAR COURSES THROUGH THE USE OF AN EDUCATIONAL APPLICATION

## INNOVATORS' DETAILS

- **KHAIRUL HISYAM BIN BAHARUDDIN**
  - NAZATUL SYIMA MOHD NASIR
  - AMAAL FADHLINI MOHAMED
    - ARIEZAL AFZAN HASSAN
    - YOHAN KURNIAWAN
    - FAIRUZ A'DILAH RUSDI

# PROJECT INTRODUCTION/ DESCRIPTION

Mobile applications for learning are gaining the attention of many in society nowadays.

The development of mobile apps using the Appy Pie platform will boost English learning, among other benefits.

The app has numerous features that are beneficial to many people, including university students

## No Code Application Development Platform – Appy Pie

Mobile app development from scratch takes far too long and pushes some of the greatest app ideas (with lower business returns) to the backburner. Low code and no code development help make mobile application development 10 times faster.

# PROBLEM STATEMENT

The current Covid-19 pandemic has become a force of change in the education sector not only in Malaysia but the world over.

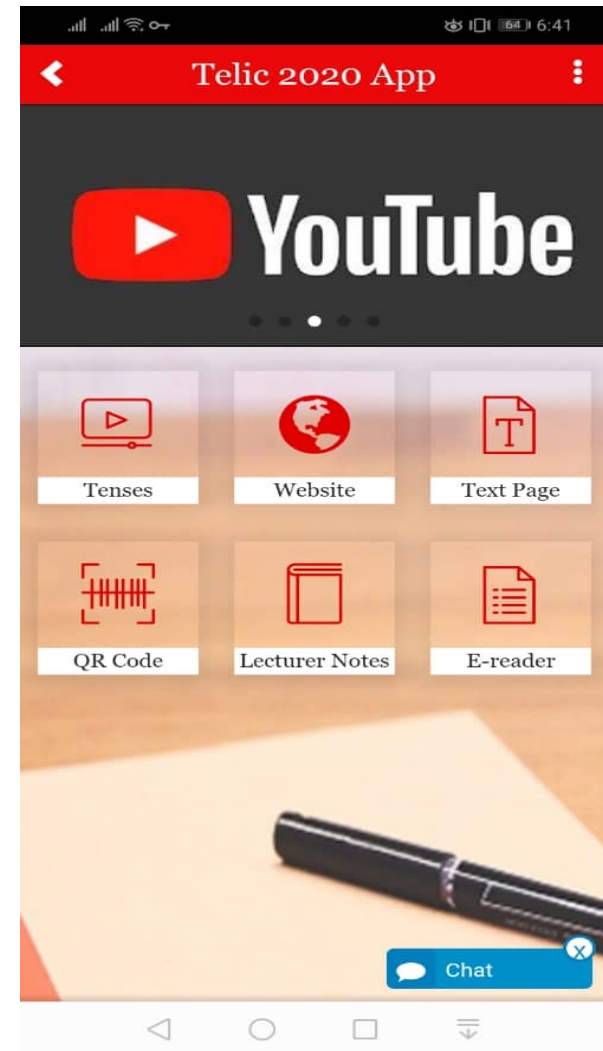

Traditional in-person methods in the classroom are being changed with online learning and distance learning methods that try to cater to the needs of various learners to be in-line with social distancing practices.

The Appy Pie application is a part of this solution as mobile application learning is getting more traction in education.

# OBJECTIVE(S)

1. To allow students to have easier access to their course material and thus reduce possible learning gaps that they might face.
2. To promote self-efficacy in learning where students are able to take charge of their learning experience.

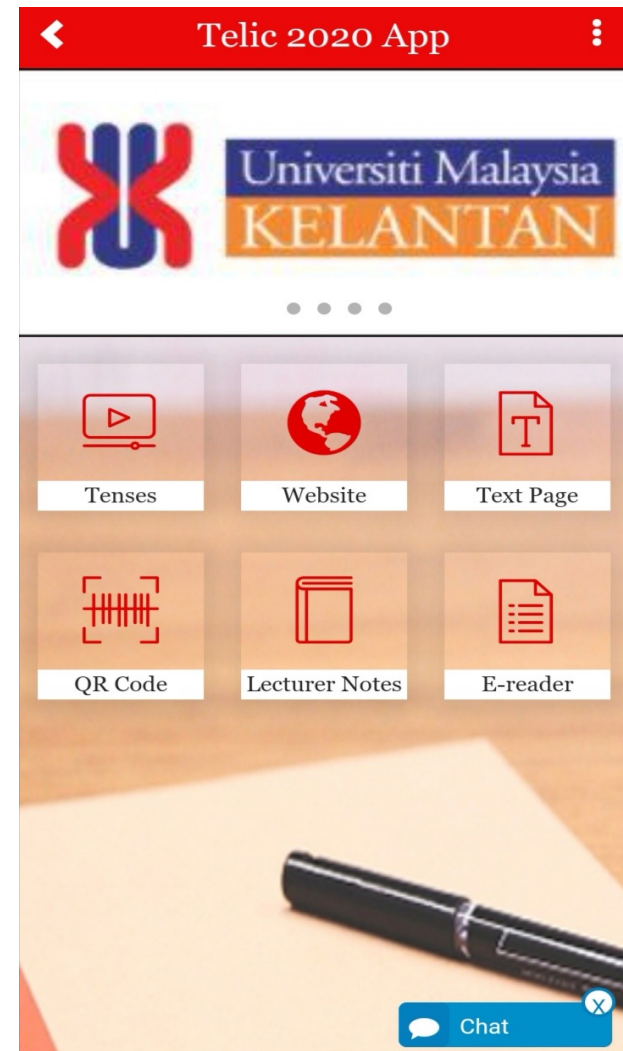

# VALUE ADDED

As the majority of current students tend to be tech savvy, the ease of access that the application provides allows them to be constantly connected to their course material as it is easily carried in their cellphone and/tablet.

It also helps them to be more organized in accessing their course materials.

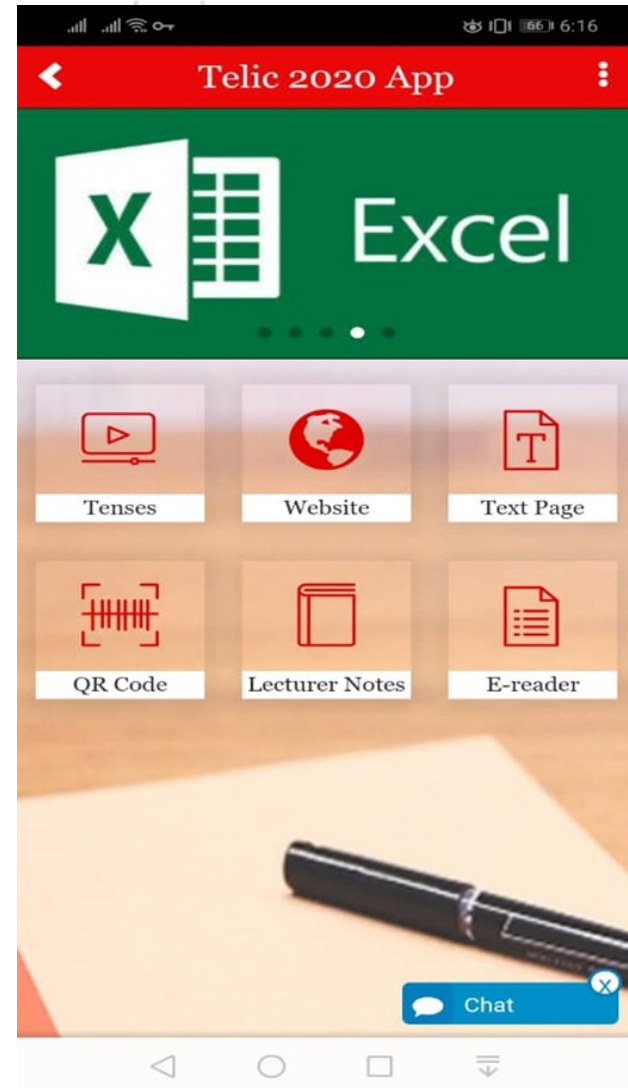

# USEFULNESS

It complements any other existing learning management systems that are already in place:

1. Wherever students are nowadays in the controlled movement control order (CMCO), they can easily access the application on their mobile device to continue learning.
2. Allows educators to tailor their teaching approaches to different kinds of learners.
3. Promotes mobile application development skills for advance students and less tech-savvy educators.

**NOVELTY**

Traditionally, mobile application development requires extensive knowledge of writing code, programming knowledge and various devices that it needs to be tested on.

The application allows ease of use to develop a mobile application that can be uploaded later on into the iOS Appstore and Android Playstore for a wider audience.

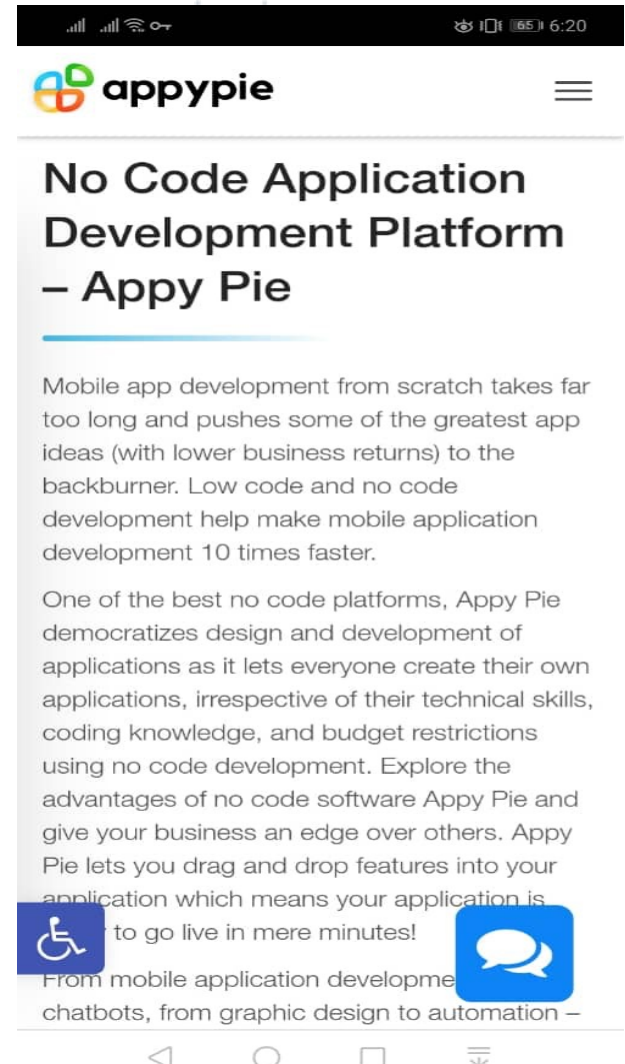

The application develops a hybrid app based on HTML 5 that is compatible with the 2 aforementioned platforms.

# COMMERCIALISATION POTENTIAL

1. Once wide-testing and final touches applied, the developed application can be put into Google Playstore and Apple Appstore.

2. Possibility to include subscription content to increase cashflow for further application development, marketing and maintenance.

# RECOGNITION

Application itself:

## G2 Awards

Appy Pie is the leading no-code platform
