

PRACTICAL ANATOMY

FOR VETERINARY STUDENTS

This is the first Veterinary Anatomy book written by a Malaysian Anatomist. This book will help students in the veterinary field to understand anatomy with ease. The book concisely covers every important topic in great detail but in a simplified manner. The description provides very comprehensive directions, along with simplified illustrations that are easy to understand. Comprised of ten chapters, this book begins with anatomical terminologies and the regions of body. Subsequent chapters explore the organs within the thoracic and abdominal cavities. The best part of the book is the dissection guide of the brain and the detailed structures that will be guided with a simplified illustration. This book covers the musculoskeletal system, thoracic cavity, abdominal cavity, central nervous system, sense organs and the nasal cavity. The step by step guides written in this book provides essential information that will be beneficial for students and instructors, especially when conducting classes in the lab.
